

Walk-thru- Deploying Lustre pre-built RPMs

Lustre server machines are simple to setup with CentOS 6. Pre-built kernel images are available from [Whamcloud's build server](#). A number of different kernels and tools are continually built and tested. For this Walk-thru the [lustre-master build](#) will be used.

Whamcloud Lustre GA

Whamcloud produce [Maintenance Releases](#) and [Feature Releases](#). This walk through covers running Lustre from the Master release. The Master release is subject to continuous integration testing but may have known or unknown issues. **If you are evaluating Lustre for your production environment**, you are advised to [contact Whamcloud](#) and substitute <http://downloads.whamcloud.com/public/> for the RPMs you need for the walk-thru below.

Prerequisite.

- A x86_64 machine with CentOS 6 installed. The machine has the hostname rhel6vanilla.

Procedure

Install Lustre directly with yum

1. Include the following entries into `/etc/yum.repos.d/lustre.repo` as follows:

`/etc/repos.d/lustre.repo`

```
[hpddLustreserver]
name=CentOS-$releasever - Lustre
baseurl=http://build.whamcloud.com/job/lustre-master/arch=x86_64%2Cbuild_type=server%2Cdistro=el6%
2Cib_stack=inkernel/lastSuccessfulBuild/artifact/artifacts/
gpgcheck=0

[e2fsprogs]
name=CentOS-$releasever - Ldiskfs
baseurl=http://build.whamcloud.com/job/e2fsprogs-master/arch=x86_64%2Cdistro=el6/lastSuccessfulBuild
/artifact/_topdir/RPMS/
gpgcheck=0

[hpddLustreclient]
name=CentOS-$releasever - Lustre
baseurl=http://build.whamcloud.com/job/lustre-master/arch=x86_64%2Cbuild_type=client%2Cdistro=el6%
2Cib_stack=inkernel/lastSuccessfulBuild/artifact/artifacts/
gpgcheck=0
```

2. run `yum install lustre-tests`
3. provided the step above completes successfully, you can skip down to the section:**Disable SELinux for Lustre patched kernel.**
4. If you experience dependency issues with yum, the best known method is to downgrade the current kernel to the version that is needed and try again.
5. If you are installing on RHEL and don't have Red Hat Network enabled, you will need to use the DVD ISO as a repo to satisfy unmet dependencies. This is covered on <http://serverfault.com/questions/156458/>

Install Lustre patched kernel.

If you choose not to use the yum install method above, you can install Lustre as follows:

1. From [lustre-master build](#), download the correct kernel RPMs for your platform
 - kernel
 - kernel-firmware
2. Install these RPMs with `yum localinstall ./kernel*`

```
[root@rhel6vanilla ~]# yum localinstall ./kernel*
Loaded plugins: fastestmirror, presto
Setting up Local Package Process
Examining ./kernel-2.6.32-279.19.1.el6_lustre.x86_64.rpm: kernel-2.6.32-279.19.1.el6_lustre.x86_64

Complete!
[root@rhel6vanilla ~]#
```

Download e2fsprogs and Lustre server RPMs.

1. Download the following e2fsprogs (and dependencies) RPMs from <http://build.whamcloud.com/job/e2fsprogs-master>
 - e2fsprogs
 - e2fsprogs-libs
 - libss
 - libcom_err
2. Download the following Lustre server RPMs from [lustre-master build](#).
 - lustre
 - lustre-ldiskfs
 - lustre-modules
 - lustre-tests

Install Lustre.

1. yum localinstall ./lustre-* ./e2fsprogs-* ./libss-* ./libcom* should do it:

```
[root@rhel6vanilla ~]# yum localinstall ./lustre-* ./e2fsprogs-* ./libss-* ./libcom*
Loaded plugins: fastestmirror, presto

  libss.x86_64 0:1.42.7.wc1-7.el6

Complete!
[root@rhel6vanilla ~]#

```

Disable SELinux for Lustre patched kernel.

Lustre does not play well with SELinux (at least, the `llmount.sh` script fails when SELinux is enabled), so SELinux must be disabled. One option is to disable SELinux with GRUB. With your editor of choice, open `/boot/grub/grub.conf`. Append the option `selinux=0` to the end of the `kernel` line for the Lustre patched kernel entry and save. This will cause SELinux to be disabled after you reboot into the patched kernel.

Reboot.

1. `reboot`

Verify that installation is complete:

1. `uname -a`

```

[root@rhel6vanilla ~]# uname -a
Linux rhel6vanilla 2.6.32-279.19.1.el6_lustre.x86_64 #1 SMP Wed Mar 20 16:37:18 PDT 2013 x86_64 x86_64
x86_64 GNU/Linux

```

2. Create a local Lustre filesystem with: `llmount.sh`

```

[root@rhel6vanilla ~]# /usr/lib64/lustre/tests/llmount.sh

```

Testing

Now that you have all the components of a Lustre system installed, you can test them. This is covered in a separate wiki page: [Testing a Lustre filesystem](#)
