

10. Running LUTF Batch test

Batch Testing

Video Transcript

Hello, this is Amir Shehata with the final LUTF quick tip.

Today, I'll show you how you can run an LUTF batch test manually. Let's dive into it. It won't take long.

You can run all the suites like this

```
suites.run()
```

You can also run a specific test suite like this:

```
suites['samples'].run()
```

Once a batch test finishes running. You can check all the results by

```
dumpGlobalTestResults()
```

That's it folks. It's been fun.

This concludes the LUTF quick tip series. I hope you found it useful. If you have any comments or questions you can leave them in the comment section of the wiki pages

Thank you and have a great day.
